	an increased breast cancer m (1) t seems to be very important to study the	
	expression of adjointectin receptor 1 (AdjoiR1) and receptor 2 (AdjoiR2) in the	
	human breast epithelial cells and breast cancer cells in order to clarify whether or not	
	adjoinentin exerts its effects directly on these cells. Expression of adjoinentin,	
	AdigoR1, and AdigoR2 mRNA was determined by RT-PCR assay using the RNA	
	samples obtained from human breast cancer cell lines (MOIF-7, T47D, SHER3, and	
	MDA-ME231), HMED (primary culture of normal human mammary epithelial cells),	
	adpose tissues (avita) as well as breast cancer cells and normal breast epithelial cells	
	selectively collected from treast cancer tissues by laser microdissection (LMD)	
	Adjorrectin mPIGA expression was observed only in the adjose tissues. On the other	
	hand, Adipo R1 and Adipo R2 mRNA expression was observed in all four treast cancer

	epithelial cells selectively collected by LMD. In addition, AdjorR1 and AdjorR2	
	expression in both normal breast epithelial cells and breast cancer cells was	
	confirmed by <u>immunichetochemistry</u> . These results suggest a possibility that
